

MULTIAMP

IMPORT USER PRESETS - INSTRUCTIONS

- Download the **USER PRESETS.zip** file from the Multiamp Ambassador page;
- Unzip the files;
- Connect the SD card to your computer (using a card reader if necessary), be sure the SD card is formatted in FAT 32 format;
- The file name contains a number of the USER bank where you'll save them, as example USER1.BNK will save the User Presets at Bank 1, so make sure to backup user presets that are on that bank before to proceed, as they will be erased.
- Drag and drop (or copy and paste) the unzipped files from the computer onto the SD card;
- Insert the SD card into the MULTIAMP and turn it on;
- at the "System" menu choose system->file->recall from SD, go to the USER bank number as the name of the file and press enter.
